

LEXUS SPRINGWOOD

COMMERCIAL DESIGN

LOCATION Springwood, Brisbane
 YEAR 2014

The Lexus showroom at Springwood occupies a prime site alongside the busy Pacific Highway and commands attention with a sweeping cantilevered roof form.

To provide a balanced scale to the large site, the project was designed over two levels. The primary structure of the building is steel frame with coated concrete tilt-up panels.

A predominant use of white gloss finishes enabled maximum daylight levels, reduced heat absorption and reduced the need for artificial lighting.
